

NIFTY 100 PROJECT

FINAL ACCEPTANCE CHECKLIST

Final verification document for the completed analytics, reporting, dashboard, NLP, machine-learning and REST API platform.

1. Acceptance Status

Area	Acceptance Requirement	Status
Data Foundation	SQLite database and core source tables available	PASS
Financial Analytics	Financial ratio engine and analytical outputs available	MISSING
Company Analytics	Company scorecard generated	PASS
Sector Analytics	Sector summary generated	PASS
Valuation	Valuation outputs generated	PASS
Risk	Risk outputs generated	PASS
Cash Flow	Cash-flow intelligence generated	PASS
NLP	Pros/cons and parsed analysis outputs available	PASS
Company Reports	Company tearsheets generated	PASS
Sector Reports	Sector PDF reports generated	PASS
Portfolio	Portfolio report generated	PASS
REST API	FastAPI application available	PASS
Automated Tests	Pytest report available	PASS
Analyst Guide	Analyst guide PDF available	PASS

2. Code Quality and Validation

Check	Command / Evidence	Expected Result
Ruff	python -m ruff check src tests	All checks passed
Pytest	python -m pytest -q	All tests pass
Database	data/nifty100.db	Database exists and is readable
API	src/api/main.py	FastAPI application available
OpenAPI	docs/openapi.json	API specification available

3. Analytics Acceptance Criteria

- Financial ratio engine produces populated financial ratio records.
- Company scorecard contains profitability, leverage, valuation and quality metrics.
- Sector analytics aggregate company-level metrics by broad sector.
- Valuation analysis produces top, undervalued and overvalued company outputs.
- Risk analysis produces safe/high-risk company outputs and risk summary.
- Cash-flow intelligence produces health classification, risk level and cash-flow score.

- NLP outputs contain generated company pros/cons and confidence scores.
- Historical analysis parsing output is available.
- Radar-chart analytics are available for company comparison.
- Portfolio statistics/reporting output is available.

4. Reporting Acceptance Criteria

- Company tearsheets are generated under reports/tearsheets/.
- Sector reports are generated under reports/sector/.
- Portfolio summary PDF is available under reports/portfolio/.
- Analytics text report is available under output/.
- Analyst guide is available under docs/.
- Reports can be consumed independently of the development environment.

5. Application Acceptance Criteria

- Streamlit dashboard application is present.
- Company profile functionality is available.
- Stock screening functionality is available.
- Sector analysis is available.
- Valuation analysis is available.
- Risk analysis is available.
- Capital allocation and portfolio statistics are available.
- NLP insights are available.
- Company reports can be accessed.
- FastAPI application is present and routers are registered.
- OpenAPI specification is available.

6. Data Quality Acceptance

- Primary-key validation implemented.
- Company/year uniqueness validation implemented.
- Foreign-key validation implemented.
- Valid-year validation implemented.
- Positive market-cap validation implemented.
- Financial-value validation implemented.
- Database contains the expected core analytical tables.

7. Final Test Execution

Final project validation should be performed from the project root.

- `python -m ruff check src tests`
- `python -m pytest -q`
- `Test-Path data\nifty100.db`
- `Test-Path src\api\main.py`

- Test-Path reports\pytest_report.html
- Test-Path docs\analyst_guide.pdf
- Test-Path docs\acceptance_checklist.pdf

8. Final Acceptance Decision

Criterion	Decision
Data foundation operational	PASS / REVIEW
Analytics operational	PASS / REVIEW
Reports generated	PASS / REVIEW
Dashboard/API available	PASS / REVIEW
Automated tests passing	PASS / REVIEW
Documentation complete	PASS / REVIEW
Overall project acceptance	PASS / REVIEW

Acceptance note: This checklist is intended as a final project-level verification document. Individual analytical outputs should be interpreted in the context of their source data and methodology.
